Review Chapter 10 from *Statistical Methods for Speech Recognition* by Frederick Jelinek.

1. Write yourself a two page summary (including any figures if you wish) of Chapter 10.
   In addition to the completeness and cohesiveness of your summary, aim for minimality of overlap with $n$-grams used in the Chapter, especially the Section headings. i.e try to express your knowledge using your own words!
   You don’t need to turn anything in; just exchange it with a classmate next week, and try to learn from each other’s way of thinking.

2. Start working on Project # 3.
