Review Chapter 13 from *Statistical Methods for Speech Recognition* by Frederick Jelinek.

1. Write a two page summary (including any figures if you wish) of the paper

   Specifically explain within your two page budget how the reorganization of computations in this paper relates to a similar idea discussed in class for a bigram model $P(x, y)$.

2. Read at your leisure the paper

   Write a two page summary, and exchange with a classmate for evaluation.
