

Post Workshop 2005 Research Project Awards GUIDELINES

AWARDING RULES.

The funds are intended to support the work of students at universities or industrial laboratories. It is presumed that the research will be supervised by the person listed in the original presentation. That supervisor is expected to present a proposal to JHU for the carrying out of the project. Only a short outline (that includes the expected project goal) and a budget plus the name of the student carrying out the work are required. If it is expected that the goal will not be reached when the funds run out, the proposal should indicate where further support might come from. We may even be able to secure continuing funding from NSF which is the sponsor of WS05.

PRESENTATION RULES.

On Wednesday and Thursday, August 17 and 18, 2005, during their review presentations, the team leaders will clearly designate which part(s) of their work constitutes a candidate project for funding. This should be done beginning with a summary slide listing the title of the possible project and the name of the student and his/her supervisor. Slides pertaining to the proposed project presentations will be made available on the same day to the Workshop administrative staff for immediate distribution to the Awards Committee.

JUDGING RULES.

The committee will observe the presentations and at the end of the day each member will be given presentation foils. To allow time for study, the committee will convene at 2:00 p.m. on Thursday August 18 Barton Hall Rm 320 for its discussion. During the deliberations, the committee may ask for clarification from the presenters (they should keep themselves available!). The committee will order the presented projects and indicate which ones in its judgment may be worthy of support. The selection will be made known to the participants at the closing dinner on Thursday evening.
